

MEDINOVA
HEALTH

Scenario Exercise

New Employee Orientation Course

Scenario

You are an eLearning developer tasked with creating a short eLearning course for Medinova Health's new employee orientation. The company needs this course to guide new hires through company history, mission statements, and a welcome video from the CEO.

Instructions- Step 1

- Set up the project by creating a new Storyline file. (See style and usage guidelines)
- Customize the slide master to include the company's standard fonts, colors, and logo.
- The opening slide should include the company's logo, and a welcome message.
- Slide welcoming the employee by name and a summary of what they will be learning.
- Introduce a variable to capture the user's name at the beginning of the course and use it to personalize subsequent slides (e.g., "Welcome, [Name], to your next step!").

Instructions- Step 2

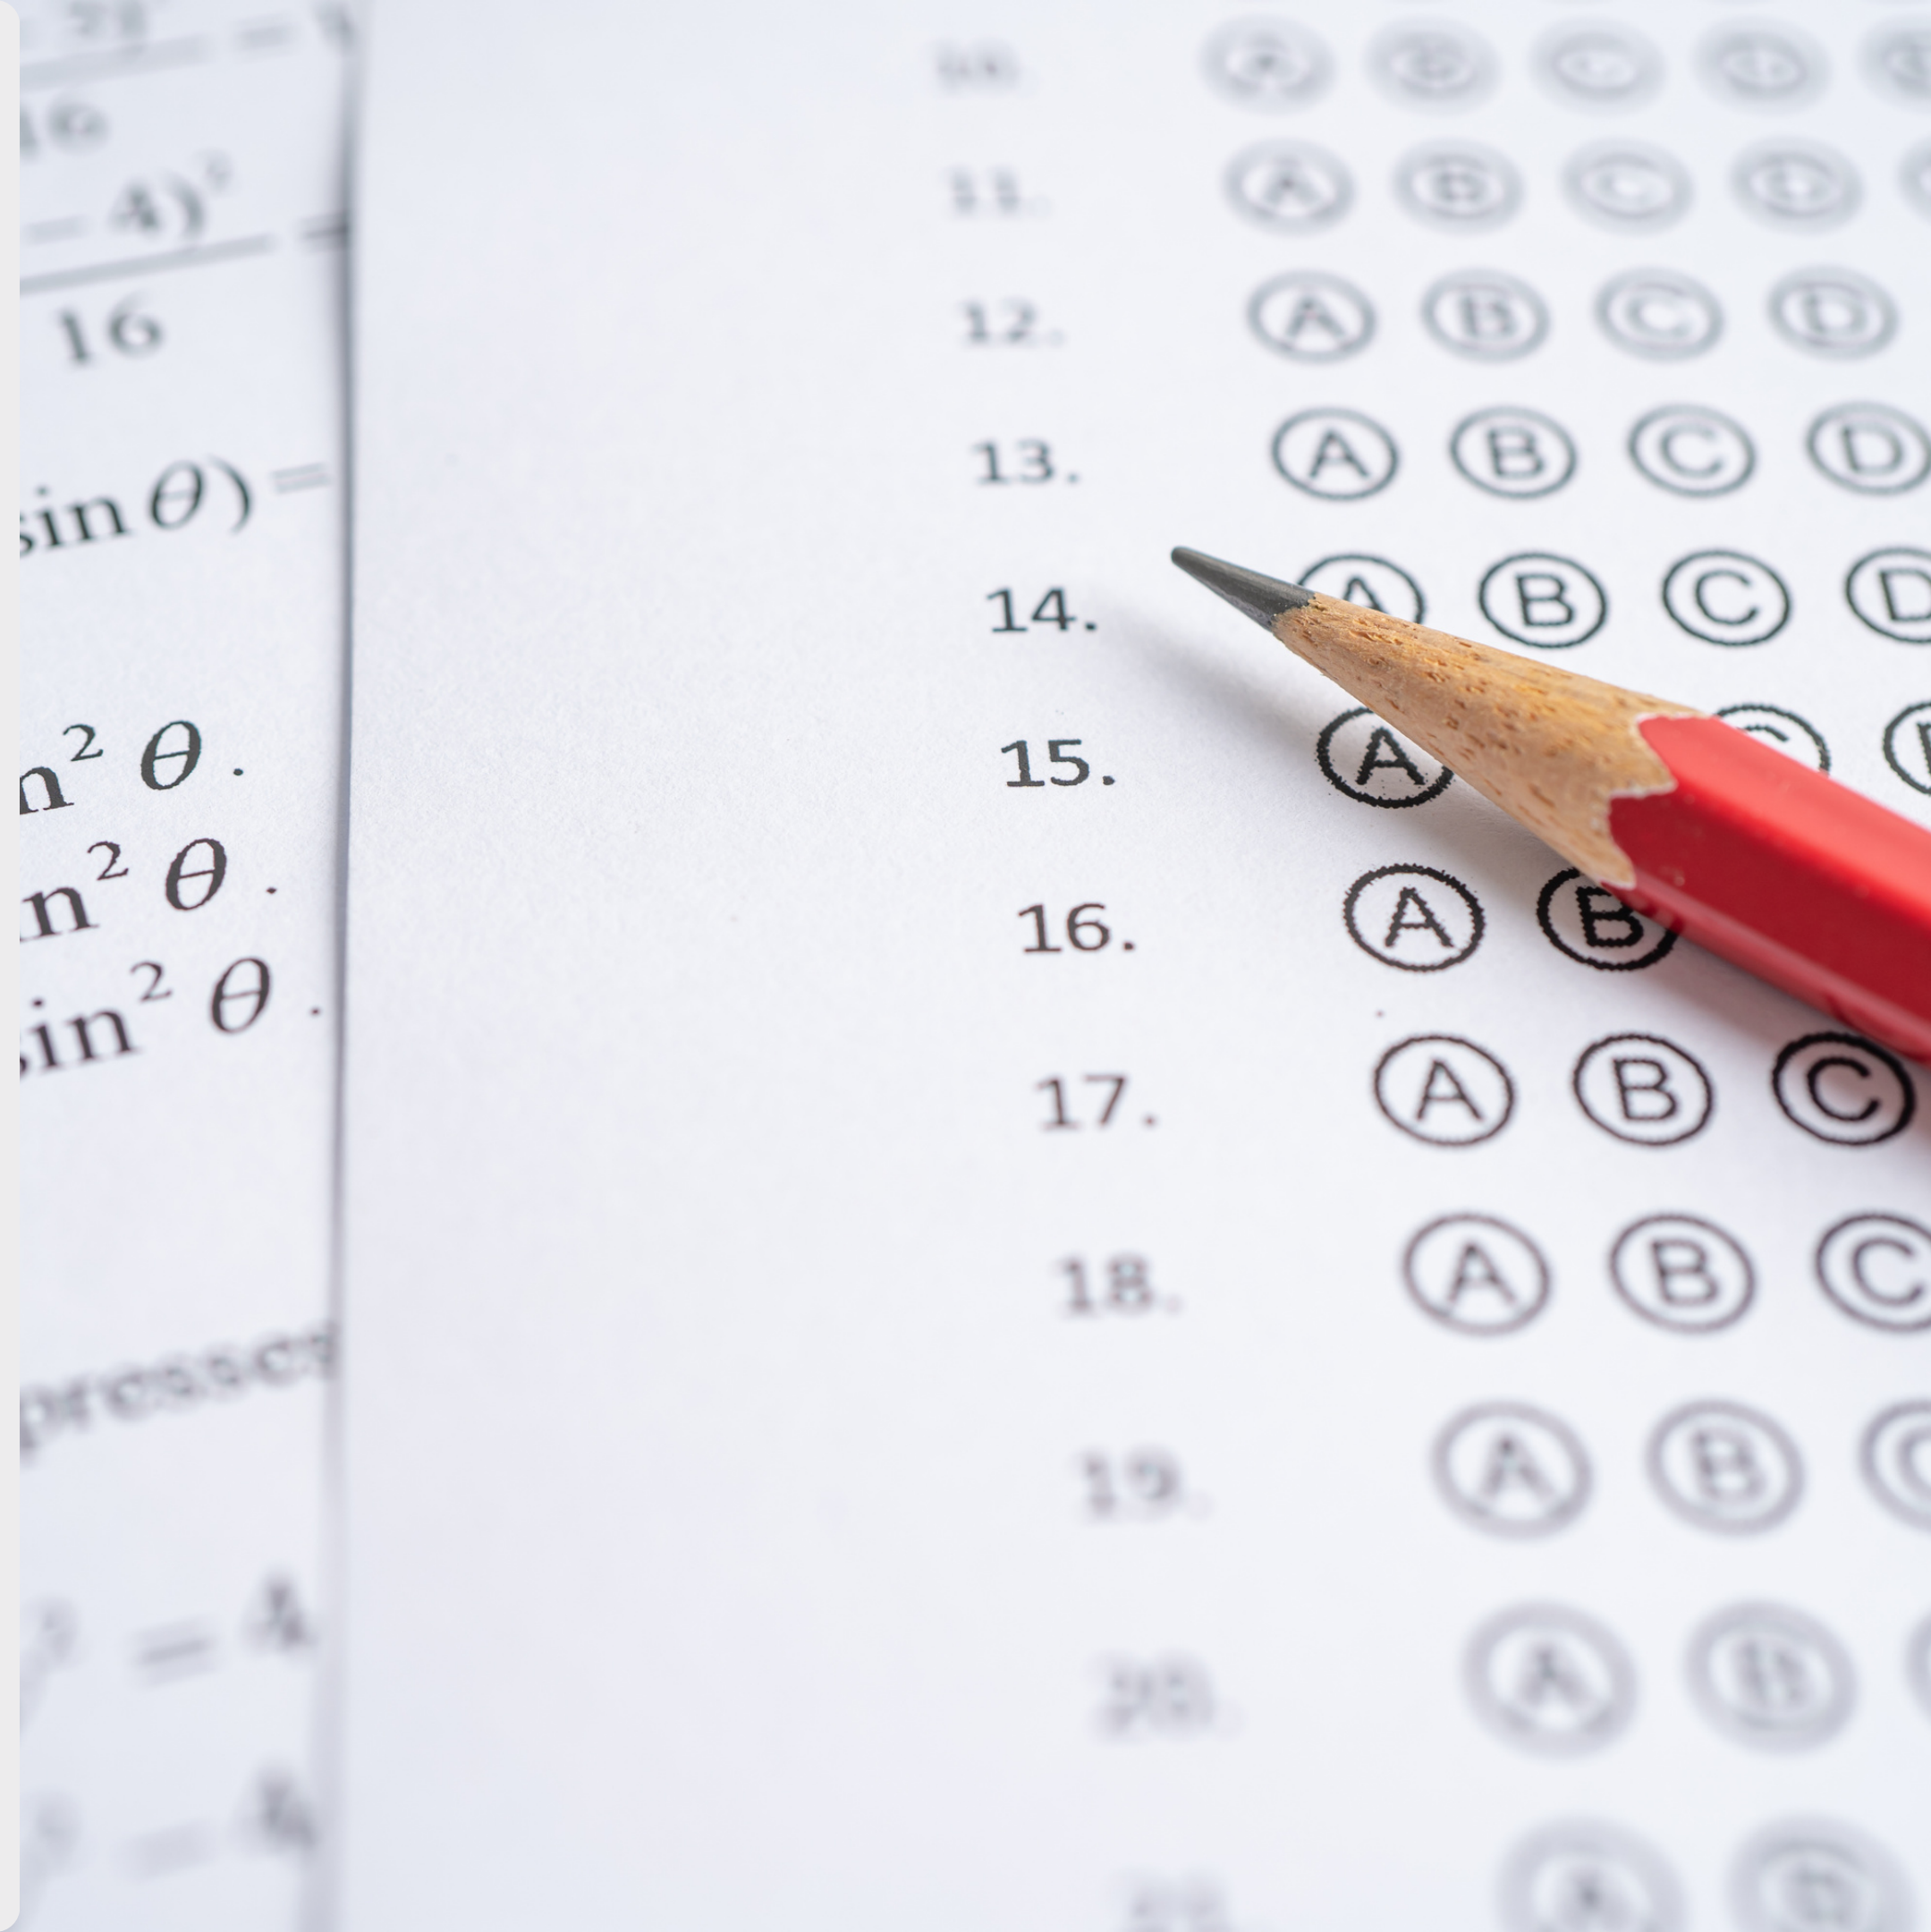

Develop a series of slides that include:

- Text descriptions of the company's history and mission statement.
- Images depicting the company culture and office environment.
- A short video welcome message from the CEO or another key figure.
- Timelines and triggers for interactive elements, like pop-ups or additional info tabs that appear when the user clicks on parts of the image or text.

Instructions- Step 3

Create a simple quiz to test new employees on basic company policies, such as workplace safety rules and the company's social media policy.

Instructions- Step 4

Configure the final details for publishing, ensuring the course is set up with the appropriate player properties.

Test the course thoroughly in preview mode to check for any issues.

Finally, publish the course to the desired format, like SCORM or xAPI, for use in the company's LMS.

(You don't actually have to publish it for LMS, but you can practice configuring the settings) You can also publish to review 360 if you'd like to share.
